

Procore + Sage 300 CRE Connector

Connector built by hh2 Cloud Services.

Procore is the only cloud-based project management platform to integrate data on-demand with Sage 300 CRE.

Manage all of your projects from a single platform.

Procore integrates seamlessly with Sage 300 CRE to synchronize financial data for all of your projects. Have the confidence in your project's financial data to make decisions from the field.

* Includes Sage 300 CRE Tax Groups

KEY: † Includes miscellaneous worksheet transactions

** Includes Cost Forecast Export

Here's what our customers have to say:

"Liles Construction Company has been utilizing Sage 300 CRE construction accounting software for over 18 years, so when we started looking for a cloud-based, collaborative project management solution, one of our top priorities was to find a product that could transport data between the two platforms in a practical format. Just when we were about to give up hope, we found Procore. Based on my interaction with the product to date, I am confident that it will save countless hours of redundant data entry, help to eliminate data information errors, and allow us to deliver more comprehensive project information to our field personnel in an efficient manner that we have never had in the past. We are looking forward to the roll-out of this innovative new feature and are confident that it will make a big difference in the way that we deliver projects to our clients."

GEORGE LILES

President, Liles Construction

"Procore's move to integrate with Sage 300 CRE is a huge step forward for our company. Bringing accounting and project management together on a unified platform will save us tremendous amounts of time and money by eliminating the need for duplicate data entry. Real-time cost data automatically fed into Procore's cost management tools will give project managers more control over project budgets, allow them to accurately forecast project costs, and provide them with better insight into the overall financial outcome of a project at completion. This new feature paired with other cutting-edge tools offered by Procore are in my opinion the way forward for technology in the construction industry."

ERIC WEATHERWAX

Training & Technology Coordinator, BBL Construction Services

Benefits:

Avoid errors and dual-entry with synchronized project cost data.

Forecast confidently from the field.

Maintain accurate and secure financial data in Procore.

Solve communication issues between accounting and project managers.

Access real-time financial information from your accounting system.

Accounting retains full control of pushing data into Sage 300 CRE.
